

SPc5 start up instructions after extended period of under-use

Before you switch the terminal on (by pressing and holding the power button for about 4 seconds allocated above nr '3' on the keypad) please ensure that all cables are firm and connected properly:

- Disconnect and reconnect to this same socket all cables which are attached to the back of the Terminal.
- Disconnect and reconnect the power cable from the power socket (ensure the socket outlet power is switched on), repeat this same process with the Comms cable
- For an IP connection – ensure the internet is working (open a web page on any device connected to the internet. If you are unable to do so, restart the router. Contact your broadband provider if the issue persists)
